# Installazione Windows 2019

# Installazione Windows 2019

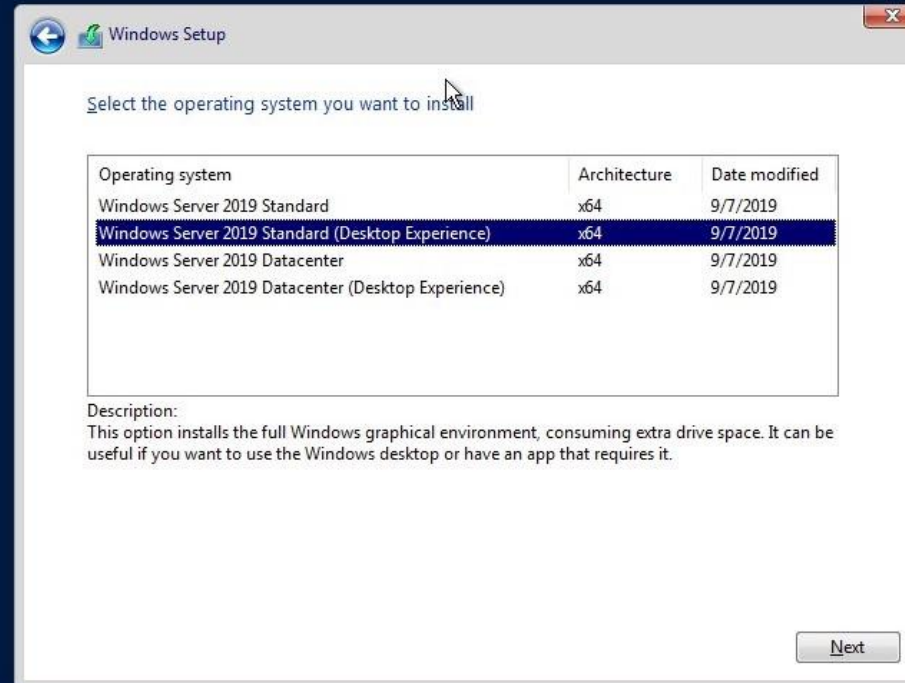

# Installazione Windows 2019

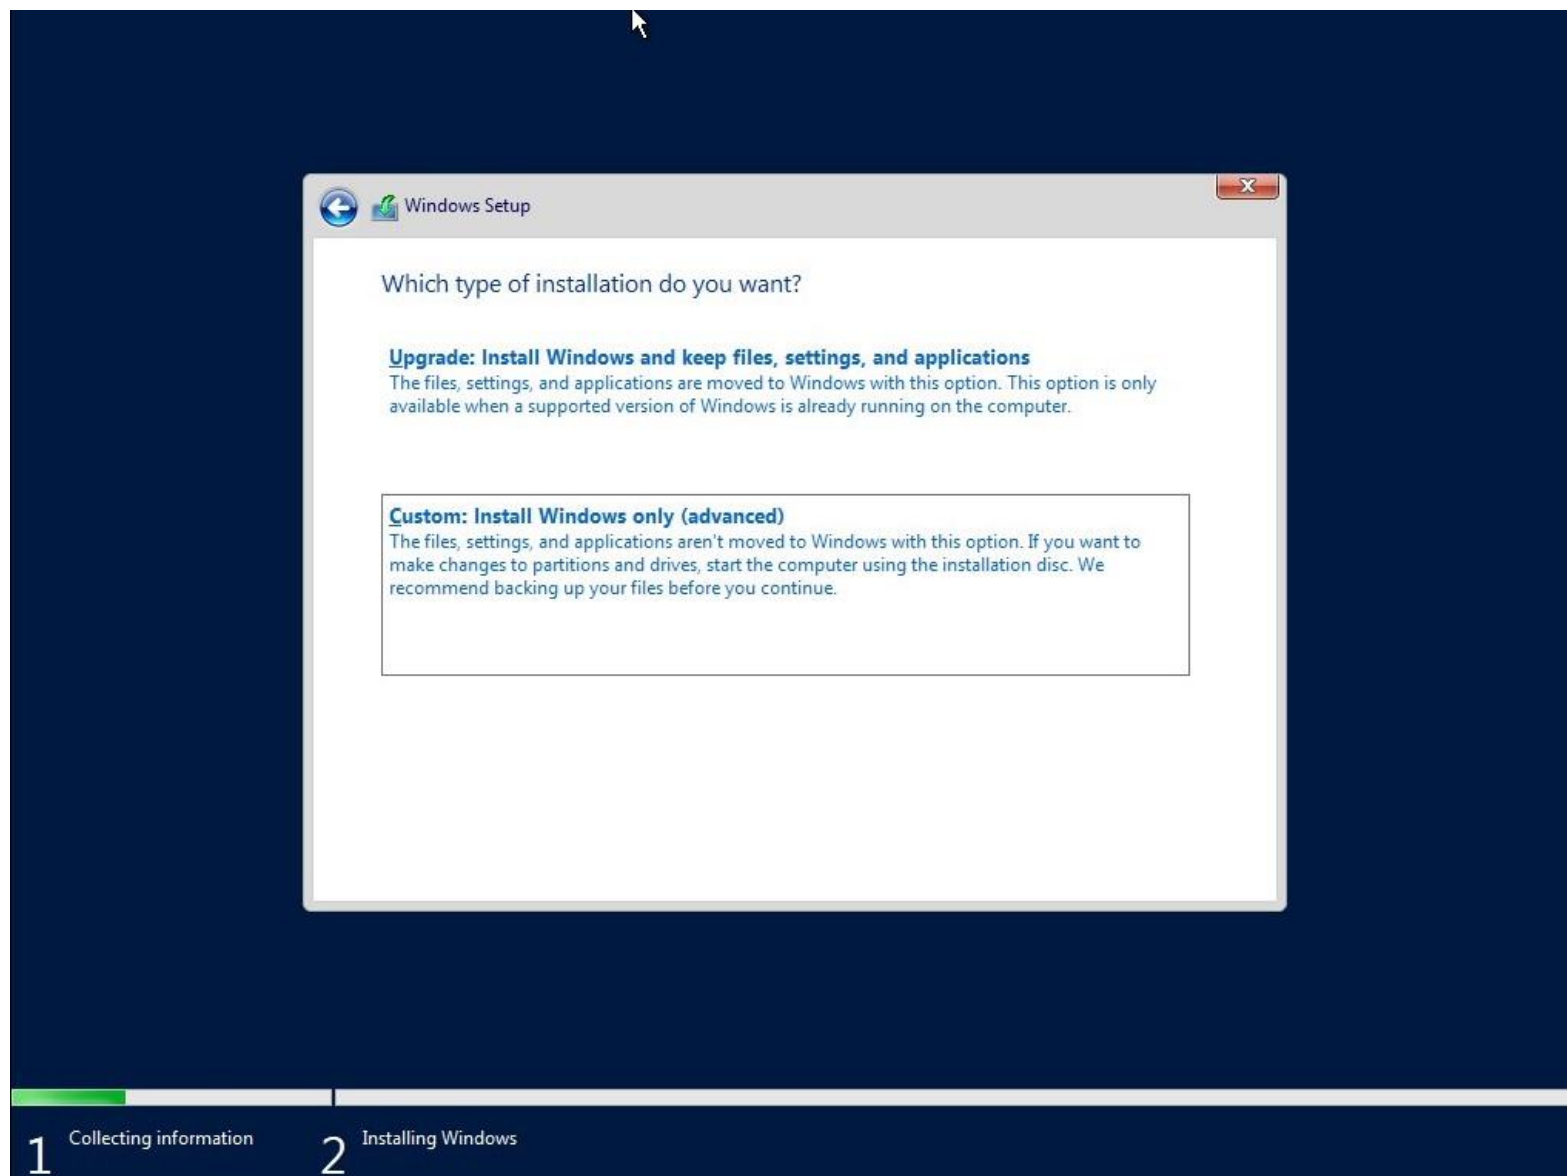

Qui possiamo selezionare il tipo di interfaccia da installare. La versione con la classica GUI che conosciamo oppure la versione «core».

In questa variante il SO non ha alcuna interfaccia se non una Powershell.

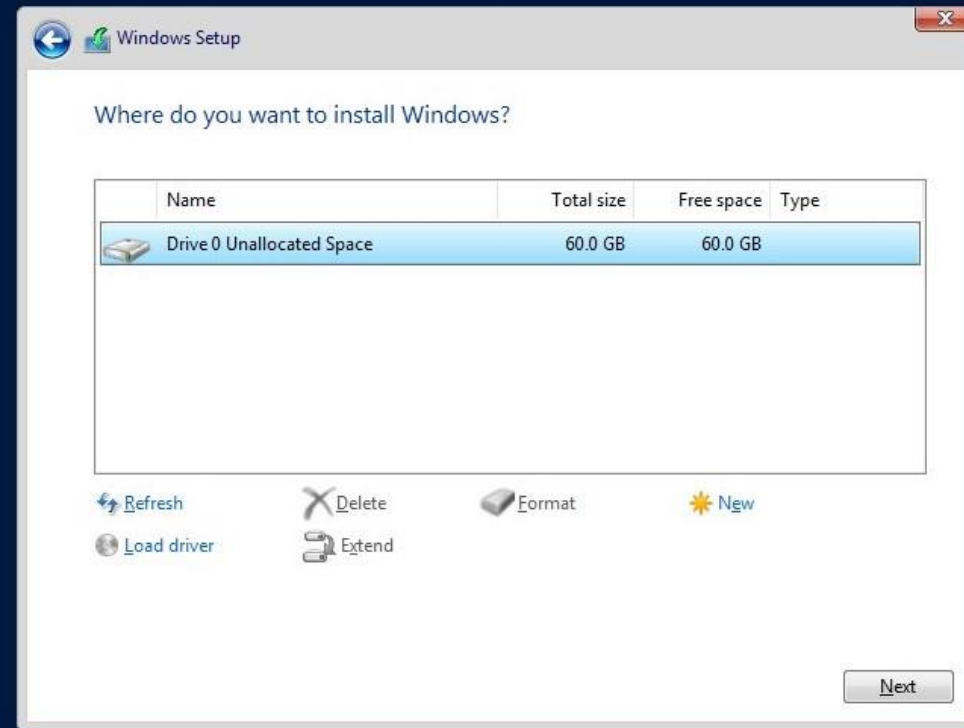

Quindi la gestione del server potrà essere fatta o con la stessa Powershell o mediante tool esterni come gli RSAT, il Server Manager remoto o attraverso snap-in mmc remoti

# Configurazione Windows Server 2019

The screenshot displays the Windows Server 2019 Server Manager interface. The main window shows the 'Local Server' properties for 'WIN-9LHBO1QJ5SH'. A dialog box titled 'Internet Explorer Enhanced Security Configuration' is open, prompting the user to configure IE ESC. The dialog box contains the following text:

Internet Explorer Enhanced Security Configuration (IE ESC) reduces the exposure of your server to potential attacks from Web-based content. Internet Explorer Enhanced Security Configuration is enabled by default for Administrators and Users groups.

Administrators:

- ☒ On (Recommended)
- ☐ Off

Users:

- ☒ On (Recommended)

# Configurazione Windows Server 2019

The screenshot displays the Windows Server 2019 Server Manager interface. The left sidebar shows the navigation pane with 'Local Server' selected. The main area is titled 'PROPERTIES For DC1'. A red circle highlights the network configuration section, which includes the following settings:

- Windows Defender Firewall: Private: On
- Remote management: Enabled
- Remote Desktop: Disabled
- NIC Teaming: Disabled
- Ethernet0: IPv4 address assigned by DHCP, IPv6 enabled

Below the properties section, the 'EVENTS' section shows a list of 18 total events. The table below contains the details of these events:

| Server Name | ID    | Severity | Source                                      | Log         | Date and Time       |
|-------------|-------|----------|---------------------------------------------|-------------|---------------------|
| DC1         | 8198  | Error    | Microsoft-Windows-Security-SPP              | Application | 06/03/2021 18:26:06 |
| DC1         | 8198  | Error    | Microsoft-Windows-Security-SPP              | Application | 06/03/2021 18:26:03 |
| DC1         | 1014  | Warning  | Microsoft-Windows-DNS Client Events         | System      | 06/03/2021 18:26:00 |
| DC1         | 4440  | Warning  | Microsoft-Windows-Complus                   | Application | 06/03/2021 18:25:55 |
| DC1         | 10149 | Warning  | Microsoft-Windows-Windows Remote Management | System      | 06/03/2021 18:25:39 |
| DC1         | 8198  | Error    | Microsoft-Windows-Security-SPP              | Application | 06/03/2021 18:22:26 |
| DC1         | 8198  | Error    | Microsoft-Windows-Security-SPP              | Application | 06/03/2021 18:21:40 |

At the bottom, the 'SERVICES' section shows 206 total services. The Windows taskbar at the very bottom indicates the time is 18:31 on 06/03/2021.

# Configurazione Windows Server 2019

The screenshot displays the Windows Server 2019 Server Manager interface. The left-hand navigation pane includes links to the Dashboard, Local Server (which is currently selected), All Servers, and File and Storage Services. The main content area is titled 'PROPERTIES For DC1' and features a 'Network Connections' window. This window shows a single network adapter, 'Ethernet0', which is an 'Intel(R) 82574L Gigabit Network C...'. Below the network connections, a list of system events is visible, showing three entries related to Windows Remote Management and Security-SPP. At the bottom of the main area, the 'SERVICES' section is partially visible, indicating that there are 206 services installed on the system. The Windows taskbar at the bottom shows the Start button, search icon, task view icon, and several application icons, along with the system clock displaying 18:32 on 06/03/2021.

# Configurazione Windows Server 2019

The screenshot displays the Windows Server 2019 Server Manager interface. The left-hand navigation pane shows the 'Local Server' tab selected. The main area is titled 'PROPERTIES For DC1'. Overlaid on this is the 'Network Connections' window, which is open to the 'Ethernet0 Properties' dialog. Within this dialog, the 'Internet Protocol Version 4 (TCP/IPv4) Properties' sub-dialog is active, showing the 'General' tab. The configuration is set to 'Use the following IP address' with the following values:

- IP address: 192 . 168 . 100 . 10
- Subnet mask: 255 . 255 . 255 . 0
- Default gateway: 192 . 168 . 100 . 2

Below the IP settings, the 'Use the following DNS server addresses' option is selected, with the following values:

- Preferred DNS server: 8 . 8 . 8 . 8
- Alternate DNS server: . . .

The 'Validate settings upon exit' checkbox is unchecked. The 'Advanced...' button is visible at the bottom right of the sub-dialog. The background shows a list of system events for DC1, including three entries for 'Microsoft-Windows-Security-SPP' with error status.

| Source | ID   | Category | Message                        | Time                |

A 'Run' dialog box is open in the foreground, showing the text 'Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.' The 'Open:' field contains 'cmd'. Below the field, it says 'This task will be created with administrative privileges.' The 'OK' button is highlighted.

# Configurazione Windows Server 2019

The screenshot displays the Windows Server 2019 Server Manager interface. A command prompt window is open, showing the execution of a ping command to www.google.it. The output indicates successful connectivity with a response time of 20ms. Below the command prompt, a list of system events is visible, including errors and warnings from Microsoft Windows Security, DNS Client Events, and Windows Remote Management. The interface also shows the 'Local Server' tab selected in the left-hand navigation pane.

# Configurazione Windows Server 2019

The screenshot displays the Windows Server 2019 interface. The top section shows the 'Server Manager' window for 'Local Server' (DC1). The left sidebar contains navigation options: Dashboard, Local Server (selected), All Servers, and File and Storage Services. The main area shows the 'PROPERTIES' for DC1, including computer name, workgroup, and system information.

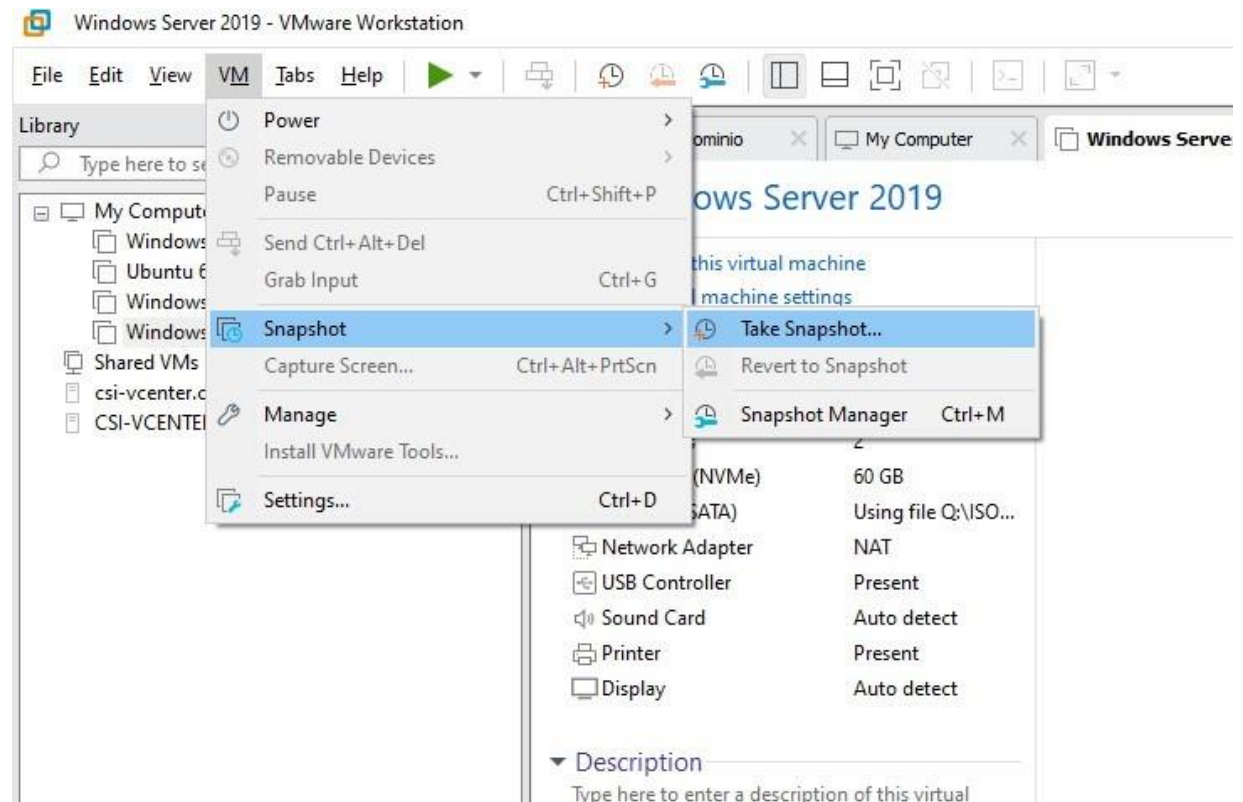

Below the Server Manager window, the Start menu is open, showing a search bar and a list of applications and settings. The 'Windows Server' section is expanded, showing various tools like Server Manager, Windows PowerShell, and Windows PowerShell ISE.

The bottom section of the screenshot shows a list of logs with columns for Log, Date, and Time. The logs are filtered by 'Application' and show events from 06/03/2021 18:21:40 to 18:26:06.

# Configurazione Windows Server 2019

Ora che abbiamo configurato Windows Server 2019 in maniera ottimale, facciamo una prima snapshot della macchina virtuale in modo di avere una situazione stabile a cui tornare in caso di problemi. Le snapshot possono essere fatte sia a macchina accesa che a macchina spenta. Per ovvie ragioni questa seconda opzione è preferibile quando possibile. Nel caso venga effettuata a macchina accesa, verrà salvato anche lo stato della memoria e della CPU in quel momento

# Configurazione Windows Server 2019

# Installazione Active Directory

Per installare Active Directory è necessario aggiungere un ruolo al server.

E' possibile aggiungere ruoli e/o features ad un server.

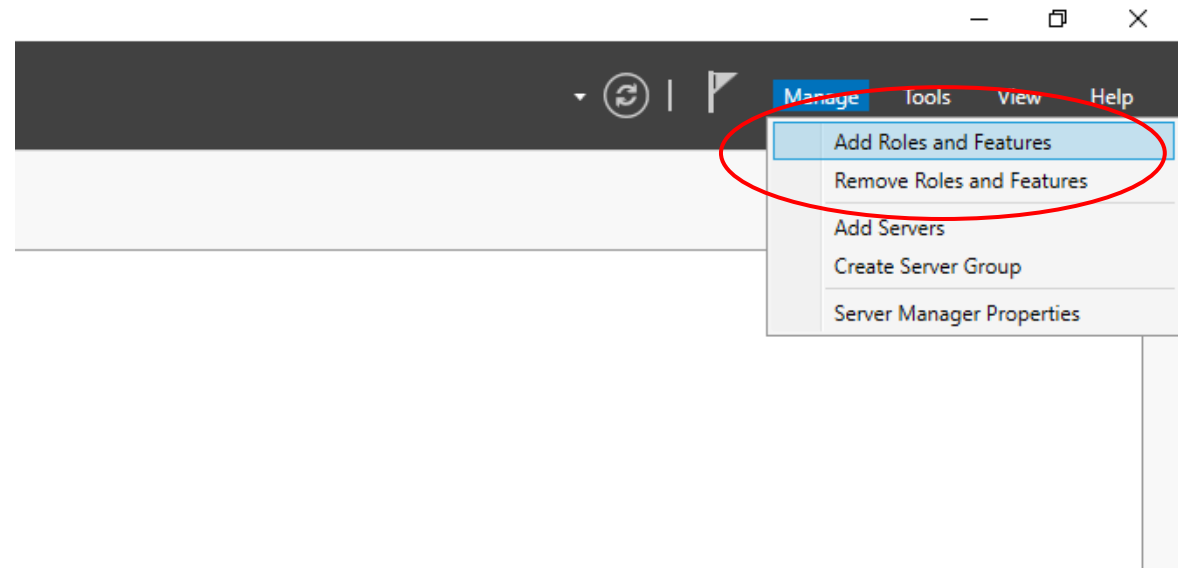

Un ruolo è un servizio aggiuntivo che il server presterà all'esterno della macchina.

La feature invece è un'estensione che viene attivata all'interno del PC.

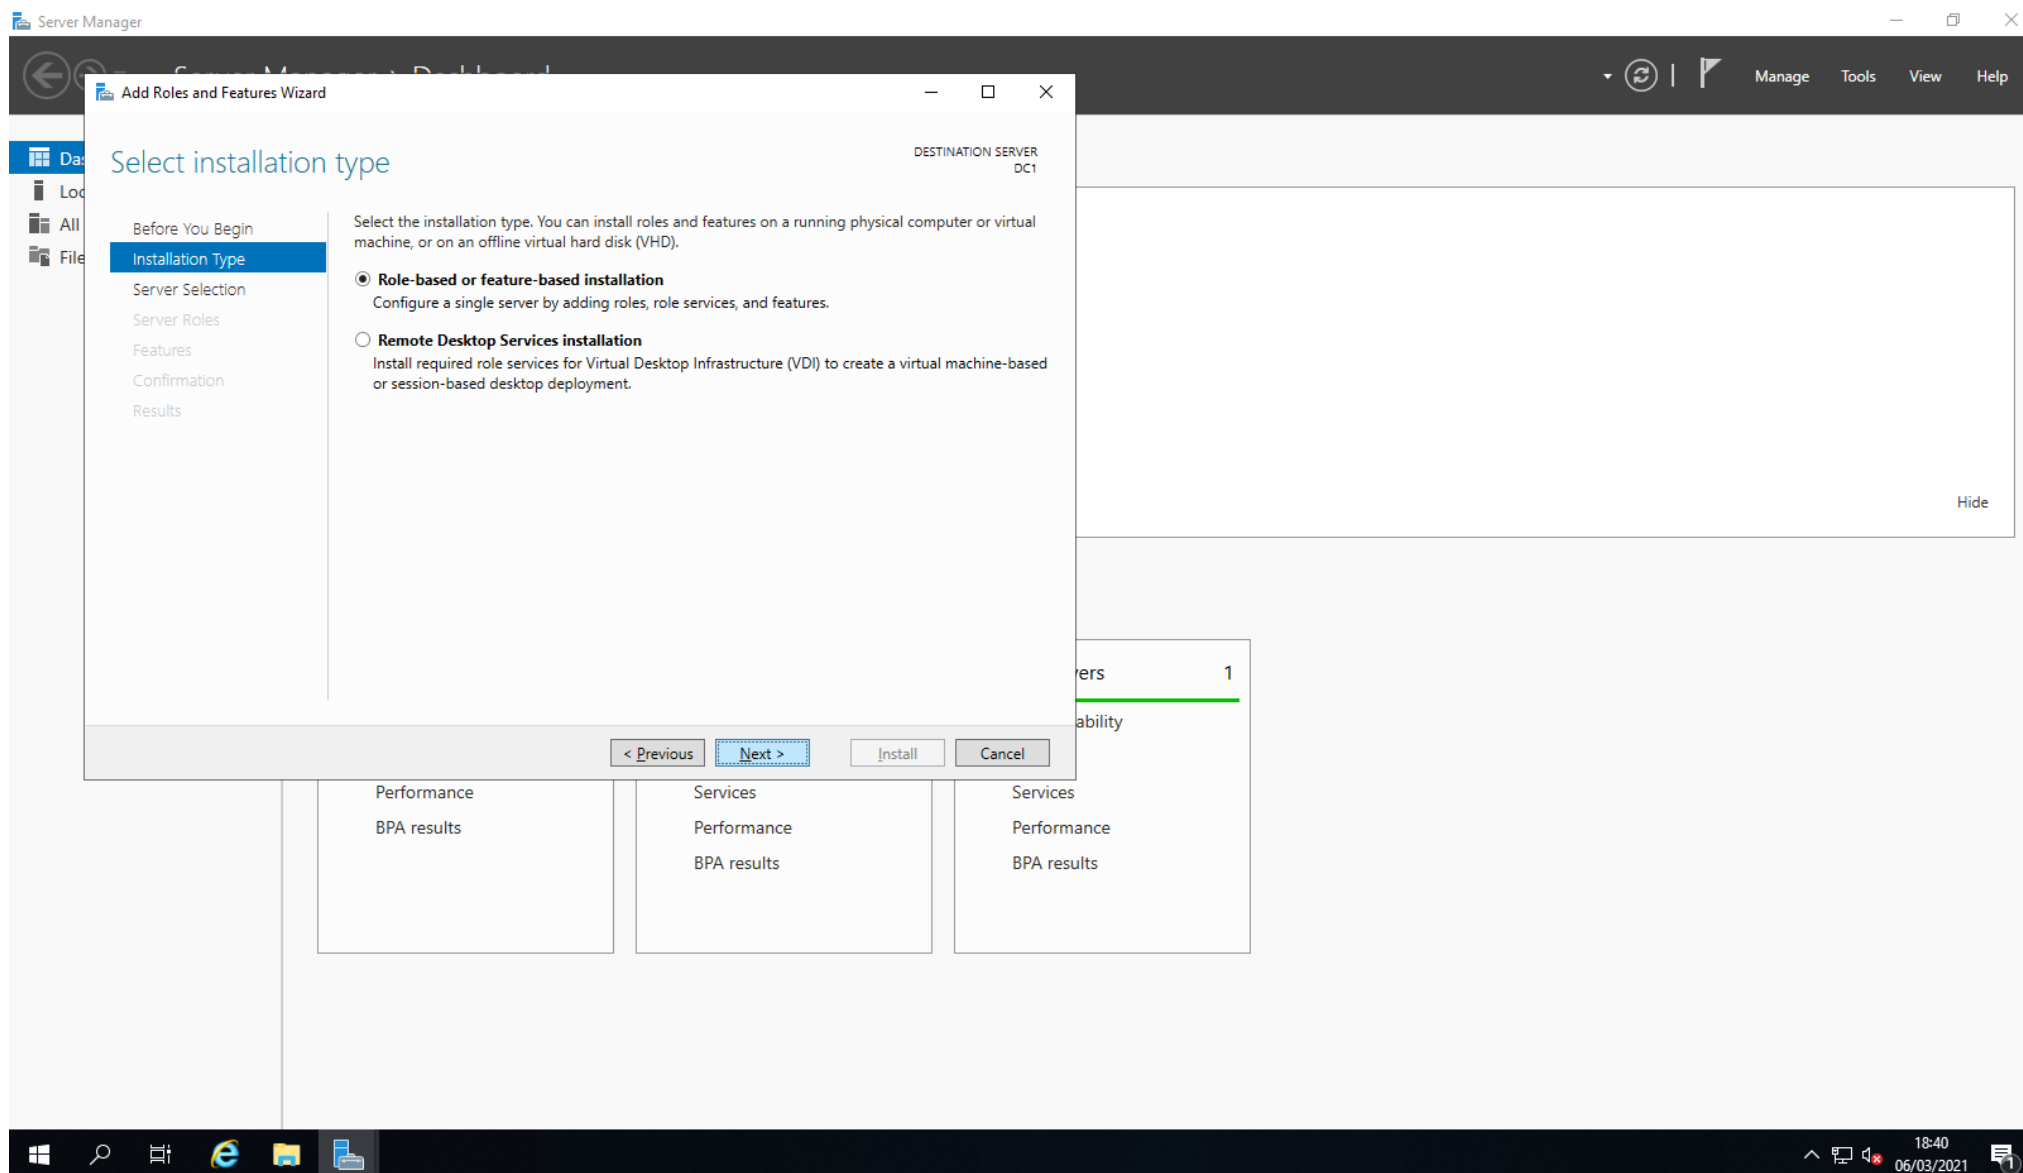

Ad esempio:

Un ruolo è il servizio DNS, attraverso il quale diamo la possibilità a PC collegati alla rete del nostro server, di risolvere i nomi di altri PC.

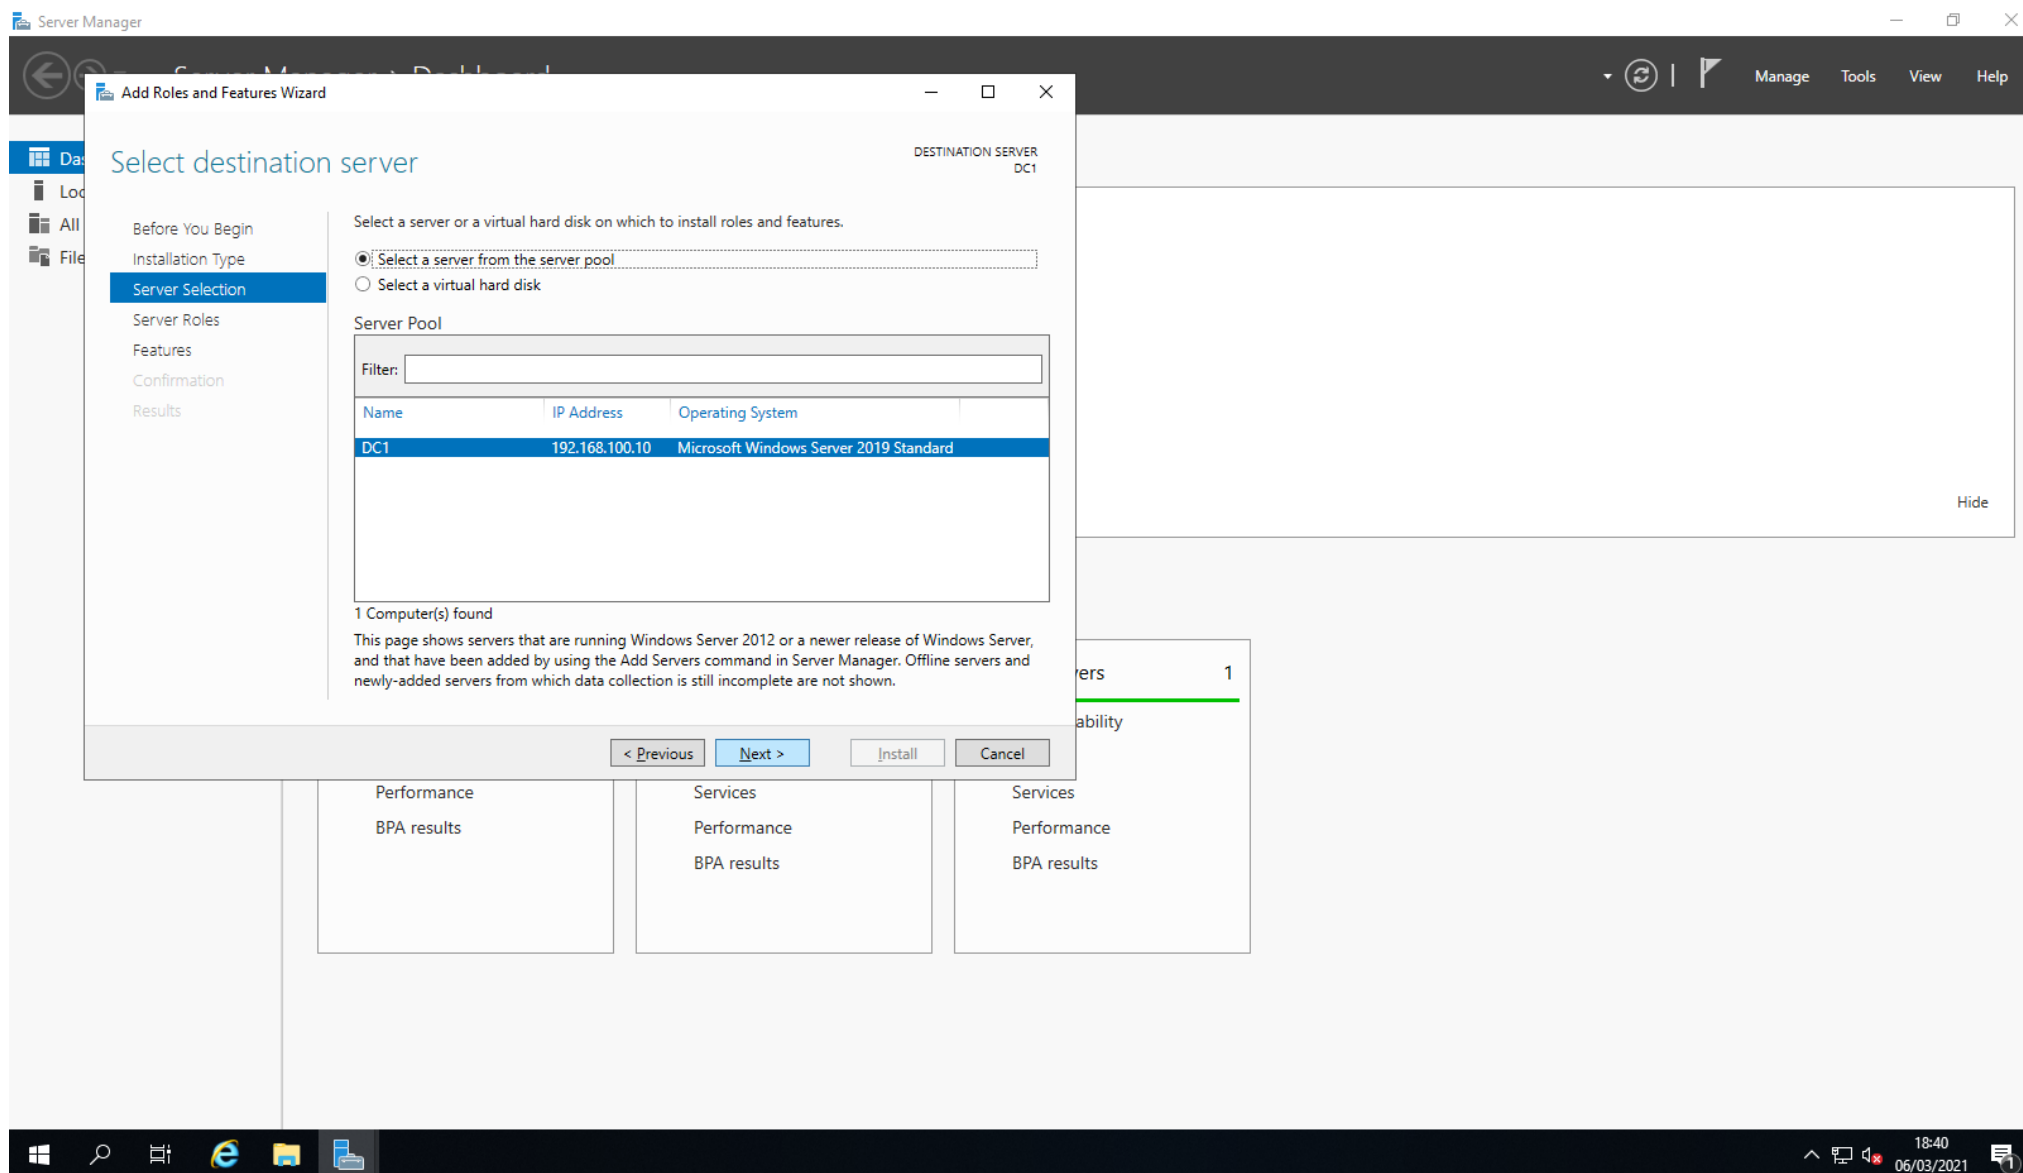

Una feature invece è l'installazione dei vari pacchetti .Net che potranno essere utilizzati da software installati all'interno del server

# Installazione Active Directory

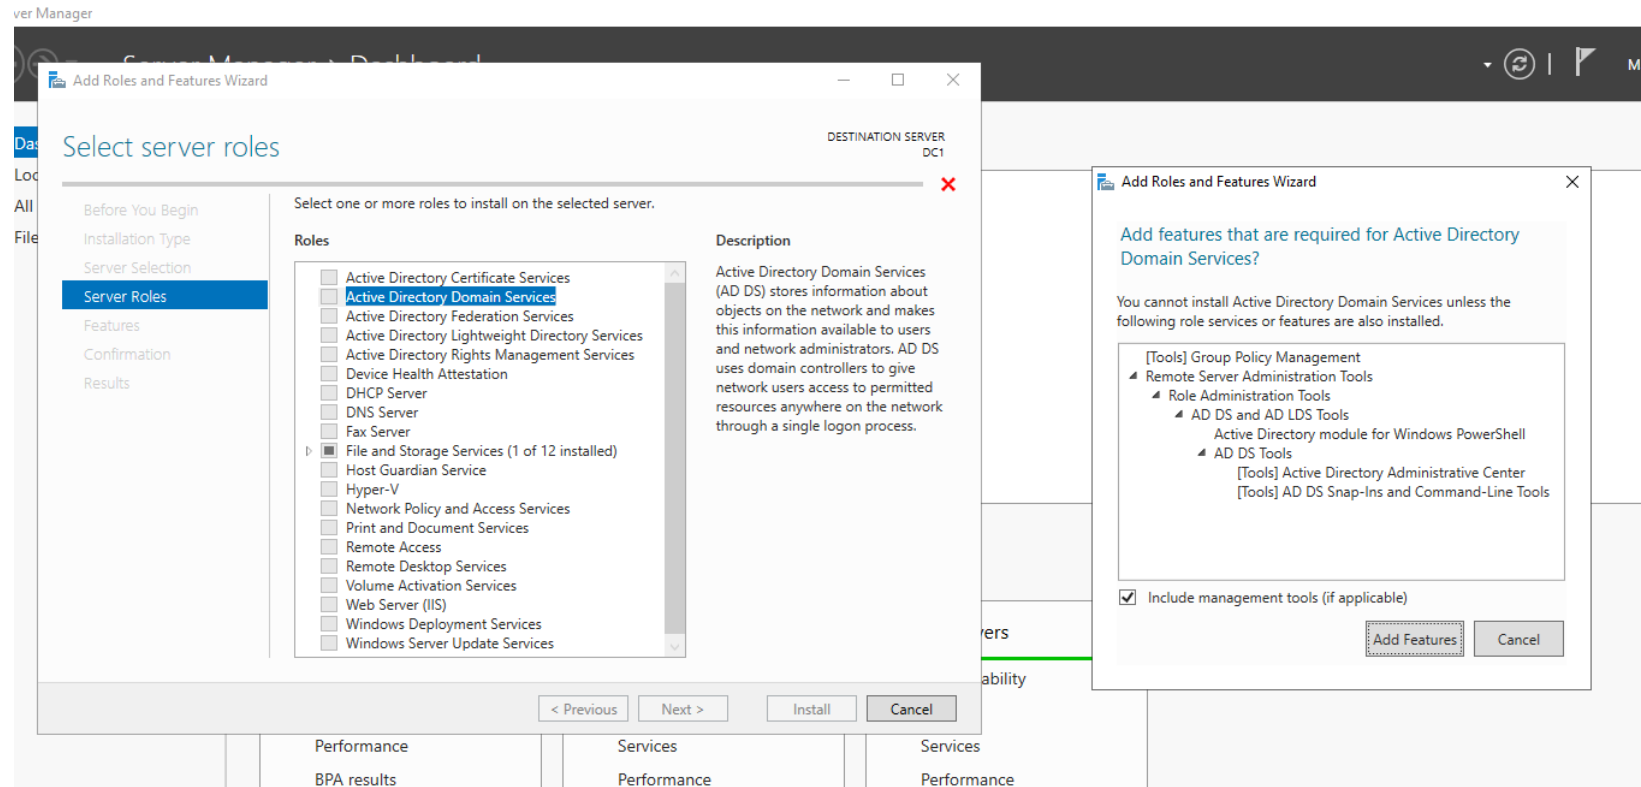

# Installazione Active Directory

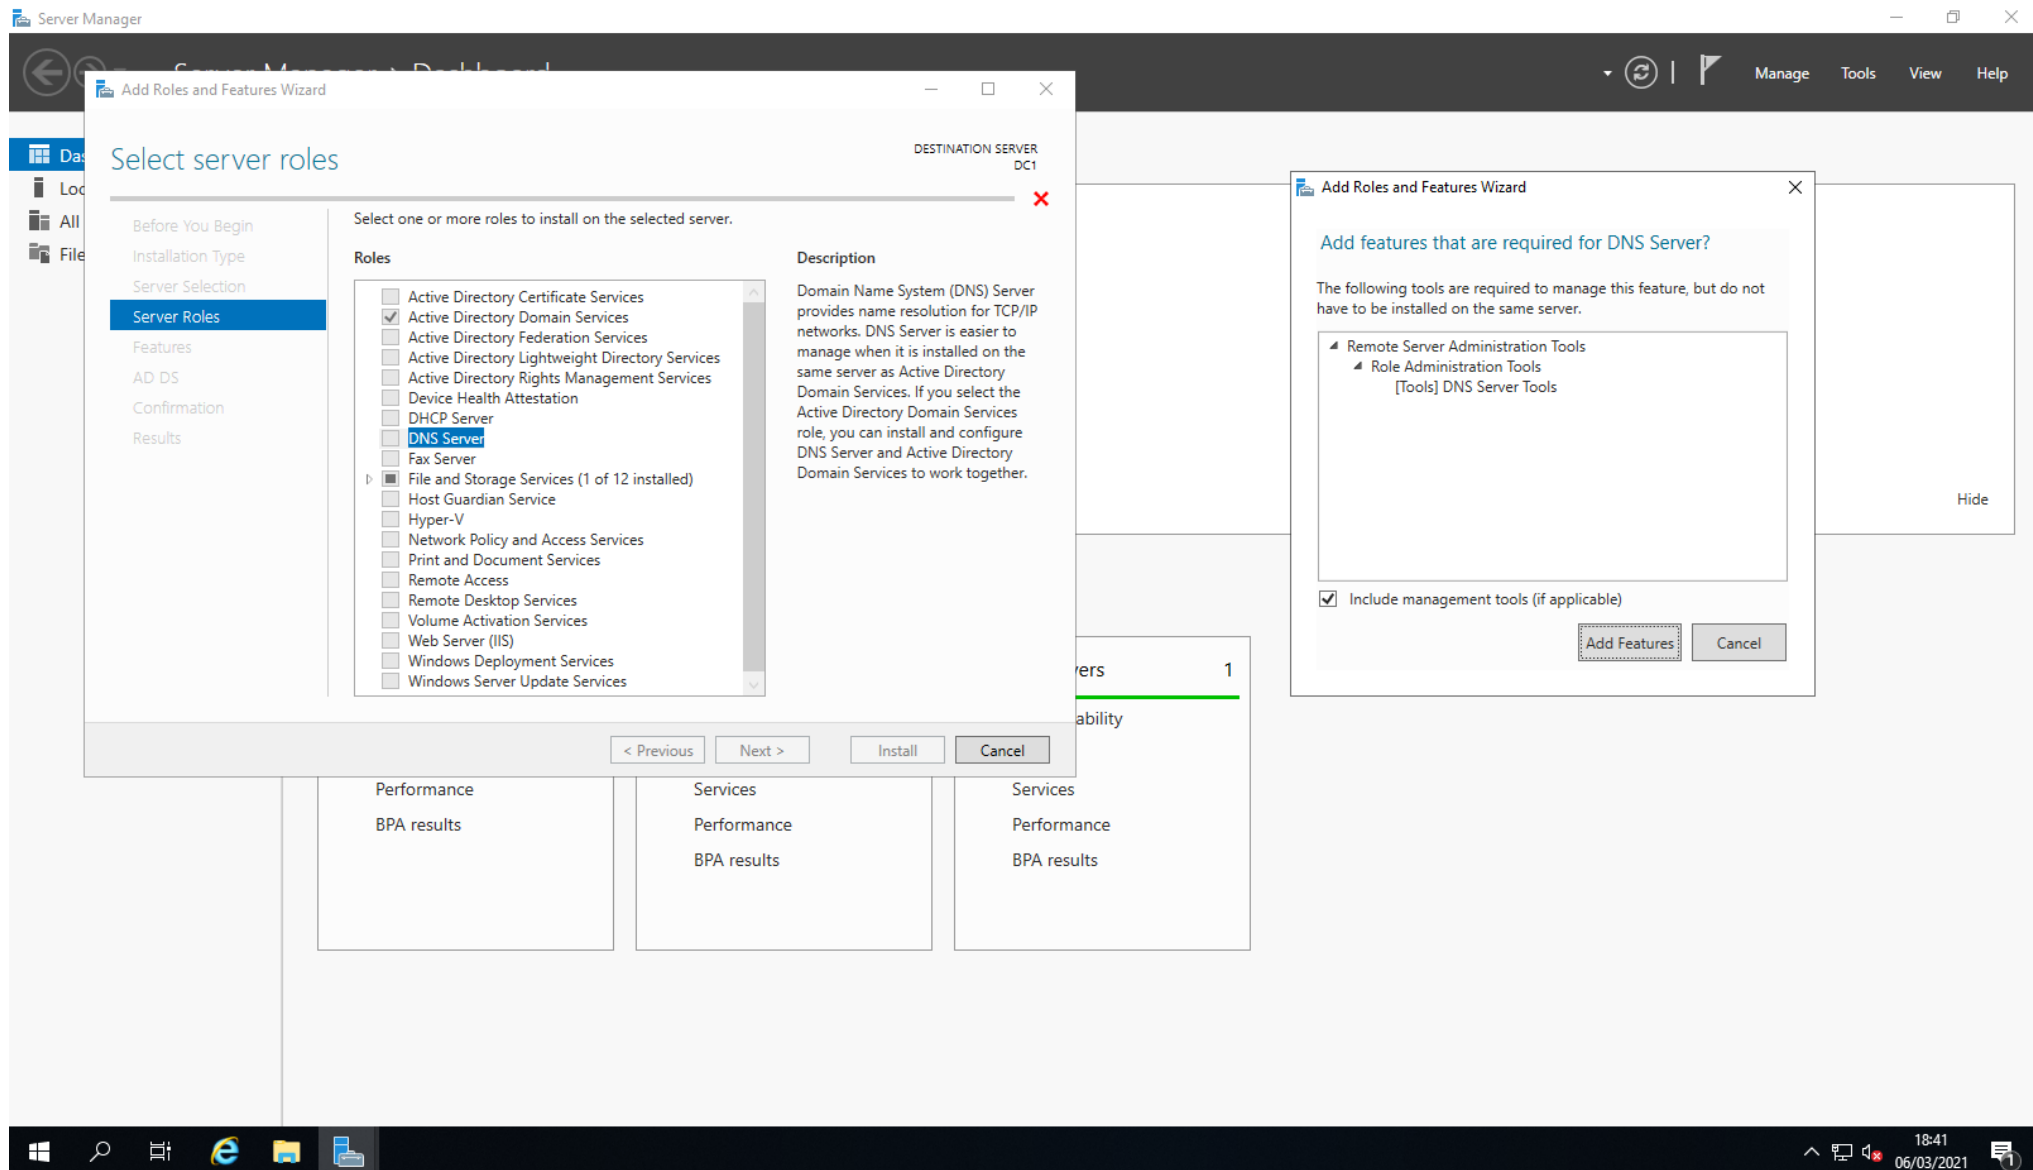

# Installazione Active Directory

A volte durante l'installazione di alcuni ruoli e/o feature viene richiesto di installare altre feature che sono dipendenze delle prime. In questo caso ci viene chiesto di installare la feature riguardanti i Tools di gestione di AD

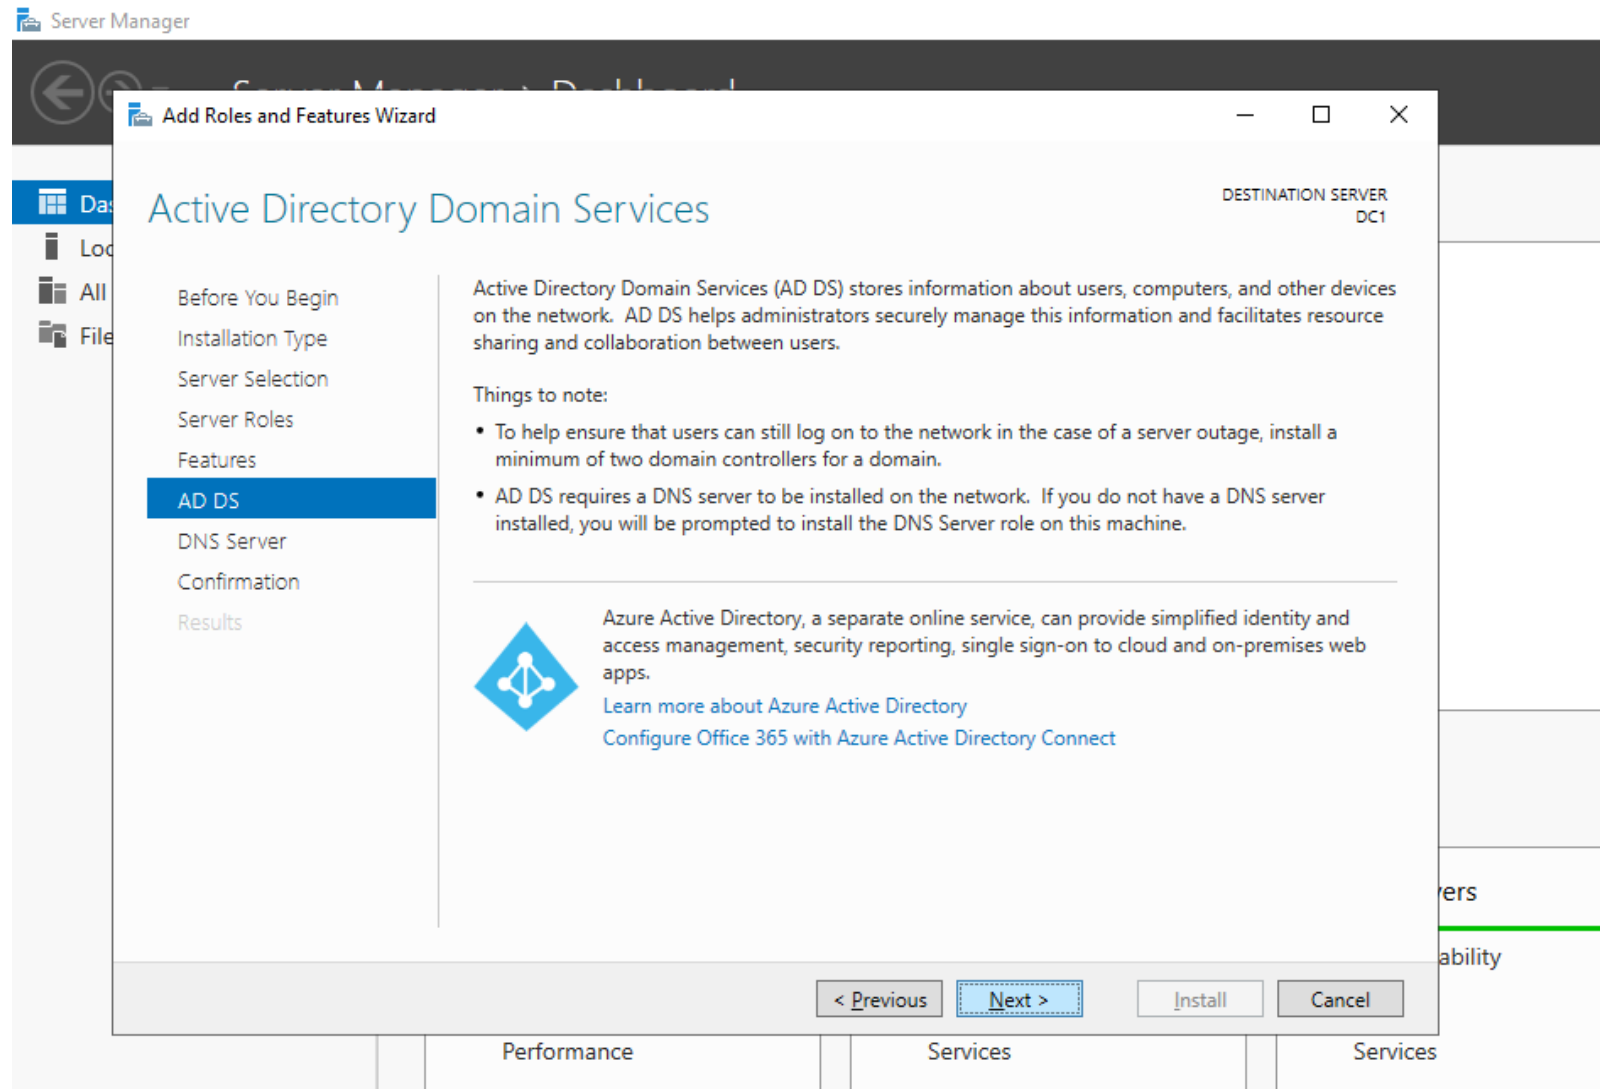

# Installazione Active Directory

# Installazione Active Directory

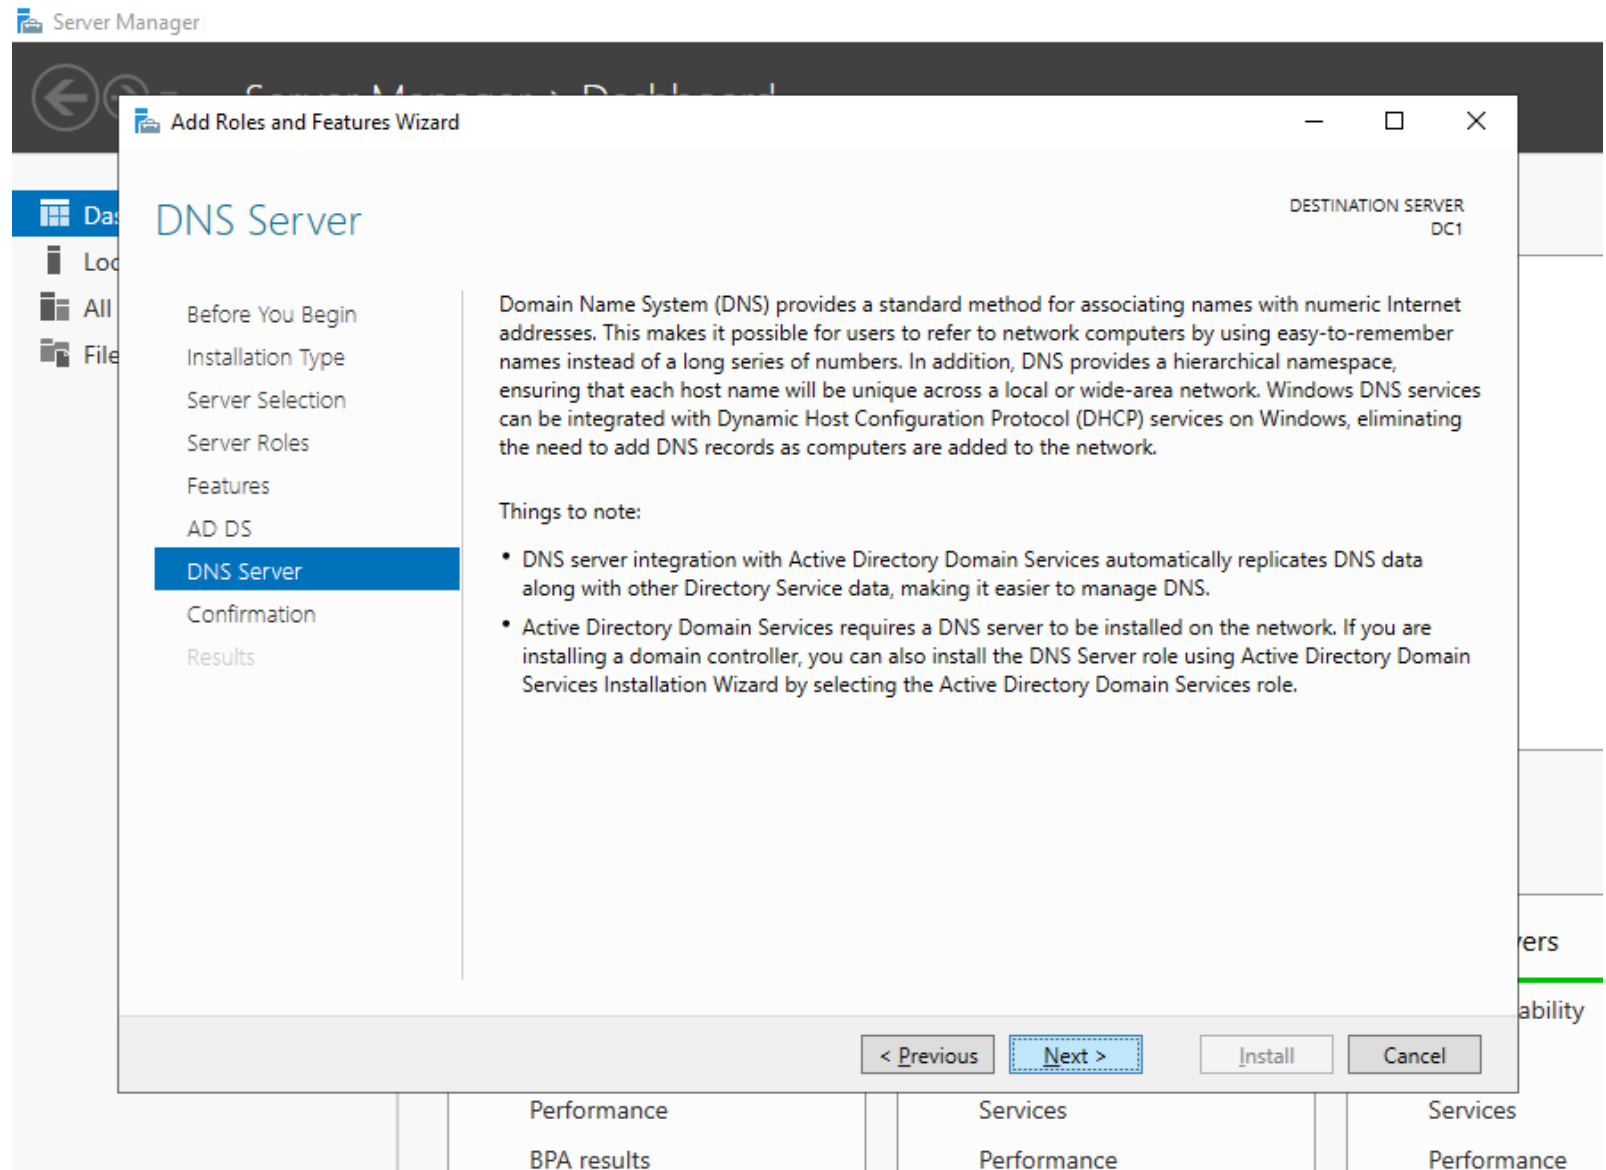

A questo punto il sistema ci fa notare alcune cose:

- Per evitare che gli utenti non riescano più ad accedere al dominio ci consiglia di installare almeno un altro DC
- AD per funzionare DEVE avere un DNS, quindi nel caso non l'avessimo, ci verrà richiesto di installarne uno in questa macchina

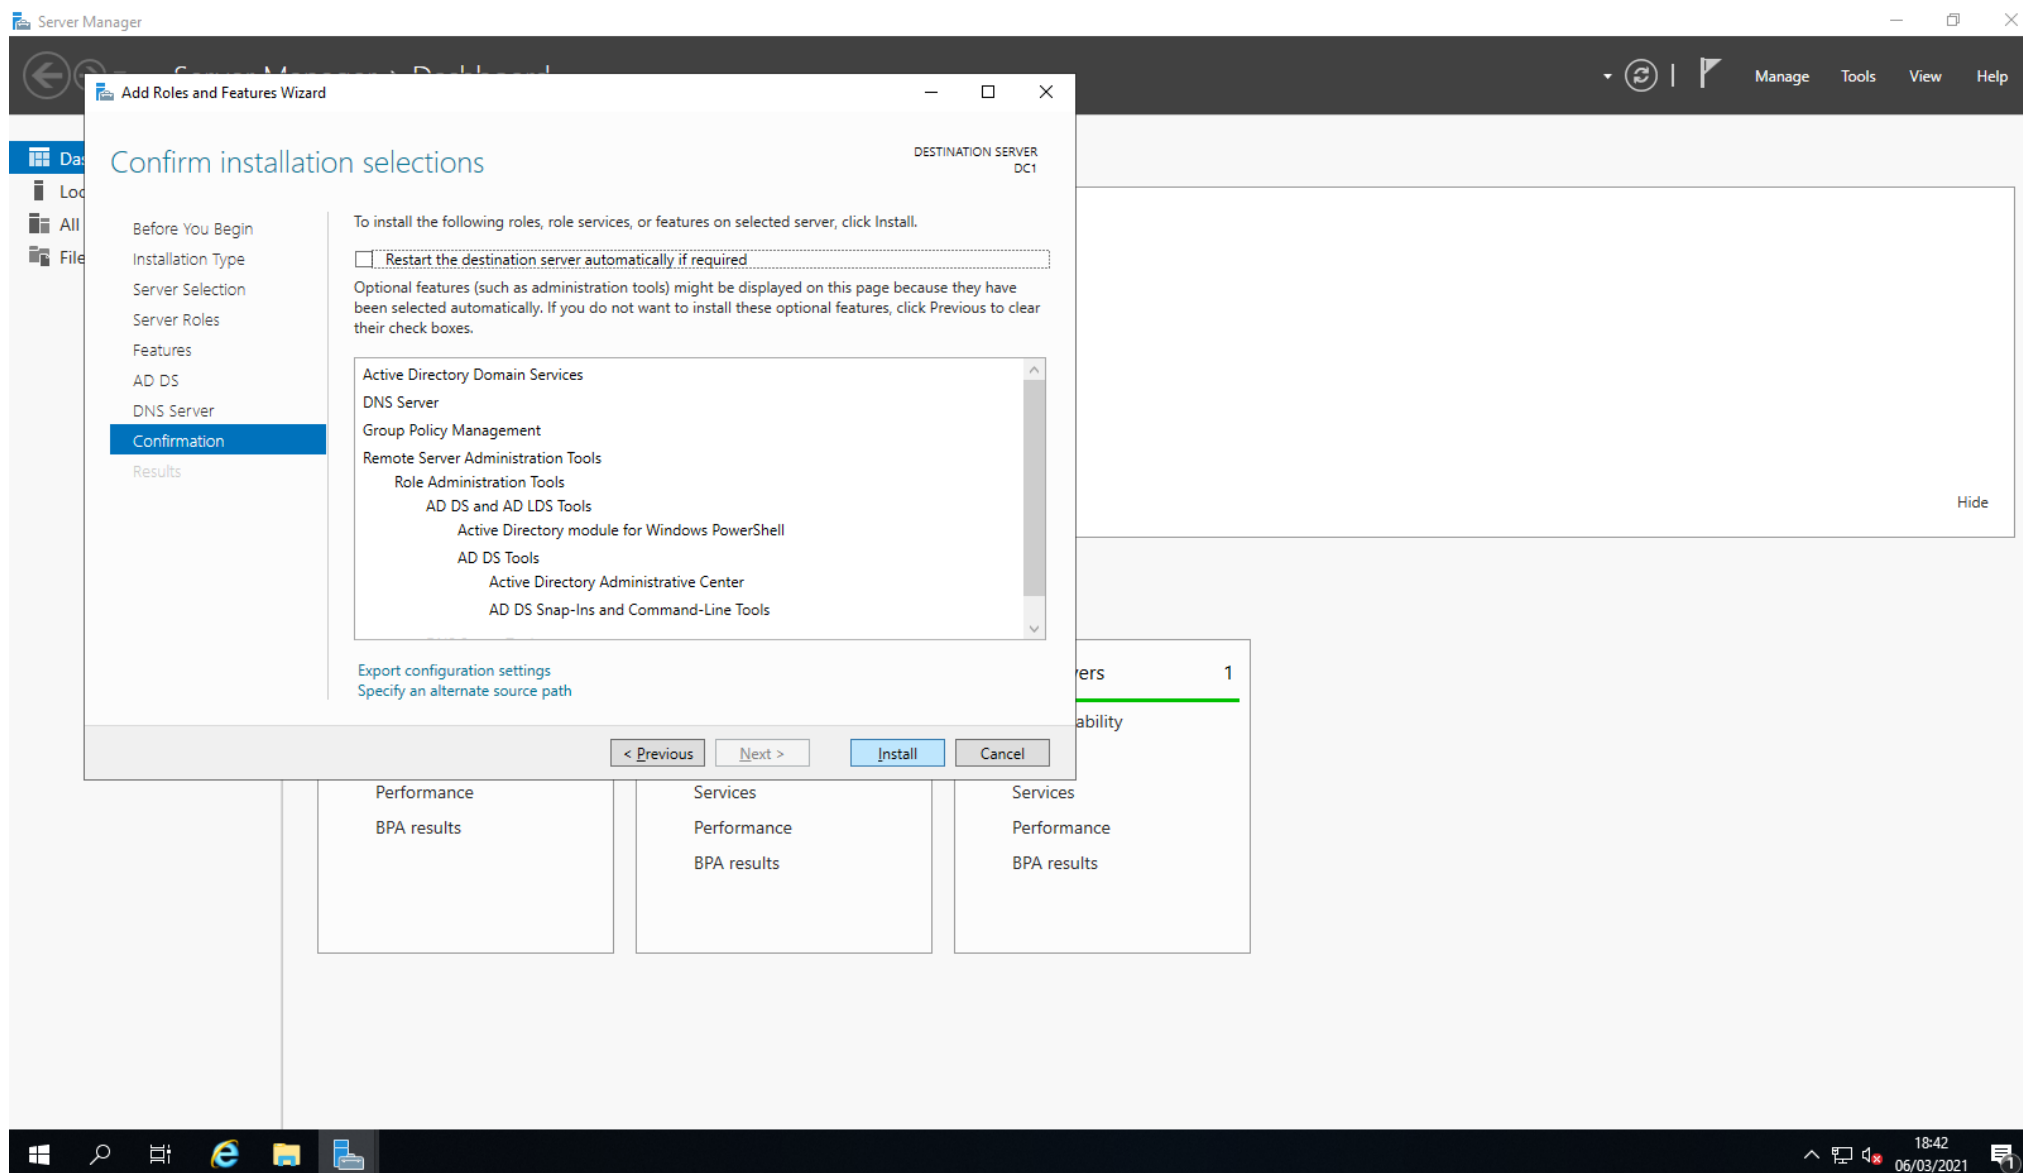

# Installazione Active Directory

Installando il ruolo di DNS, ci viene fatto notare che il DNS è integrato all'interno di Active Directory e che i suoi dati saranno automaticamente replicati insieme agli altri dati del Directory Service

# Installazione Active Directory

L'installazione di AD è andata a buon fine. Ora ci viene segnalato che sono necessarie delle configurazioni post installazione.

In particolare ci viene chiesto di «promuovere» il nostro server a Domain controller.

In inglese vengono usati i termini «promote» per promuovere un server a DC di un dominio e «demote» per far retrocedere un server Domain Controller a server standalone

# Installazione Active Directory

# Installazione Active Directory

The screenshot displays the Windows Server Manager interface. The 'Server Manager' dashboard is visible at the top. The 'Active Directory Domain Services Configuration Wizard' is open, showing the 'Review Options' step. The wizard is titled 'WELCOME TO SERVER MANAGER' and 'TARGET SERVER DC1'. The 'Review Options' section lists the following configuration details:

- Configuration: Configure this server as the first Active Directory domain controller in a new forest.
- Domain Name: The new domain name is "test.local". This is also the name of the new forest.
- NetBIOS Name: The NetBIOS name of the domain: TEST
- Forest Functional Level: Windows Server 2016
- Domain Functional Level: Windows Server 2016
- Additional Options:
  - Global catalog: Yes
  - DNS Server: Yes
  - Create DNS Delegation: No

At the bottom of the wizard, there are buttons for '< Previous', 'Next >', 'Install', and 'Cancel'. A link 'More about installation options' is also present.

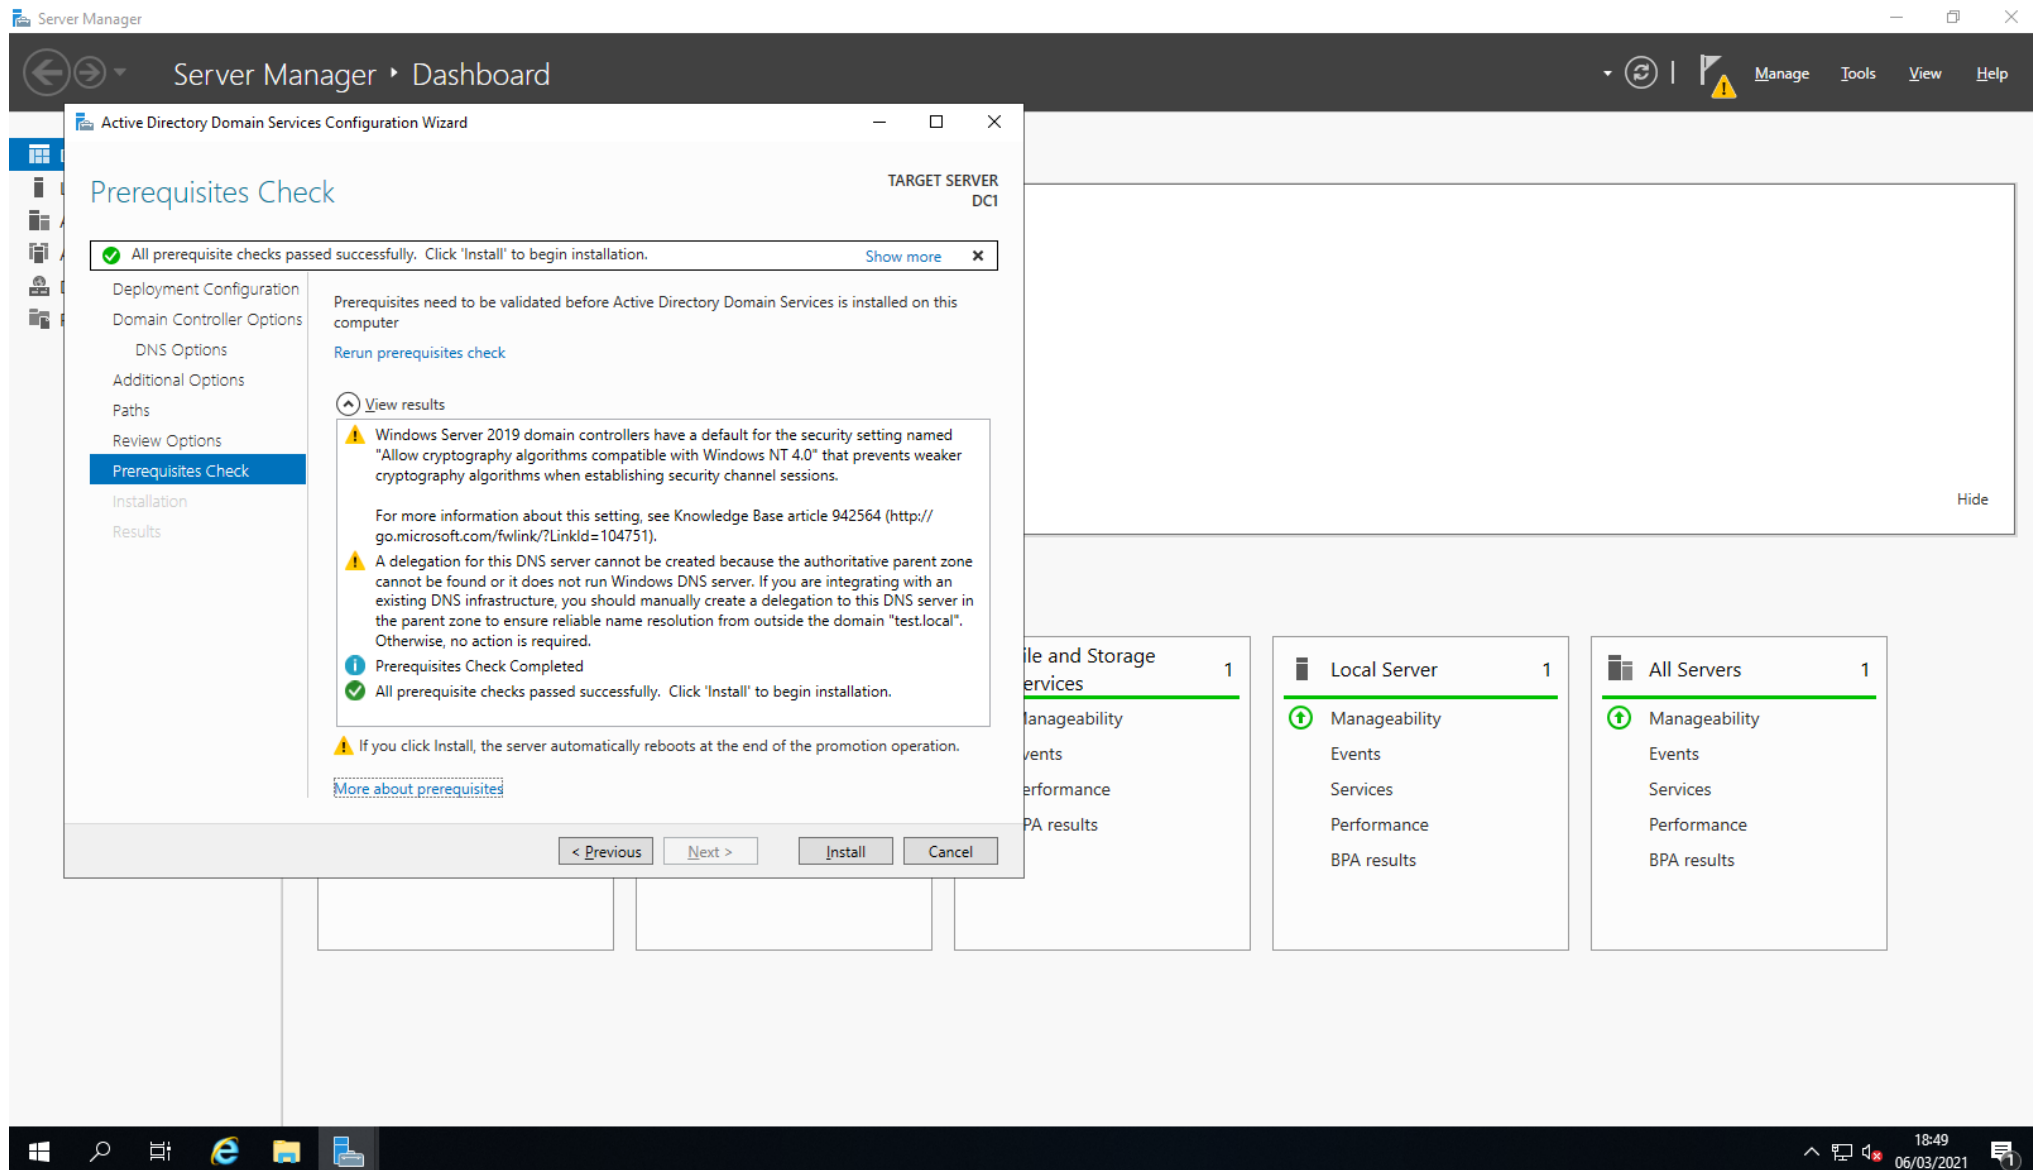

Overlaid on the right side of the wizard is a Notepad window titled 'tmpCFC8.tmp - Notepad'. It contains a PowerShell script for automated AD DS deployment:

```
# Windows PowerShell script for AD DS Deployment

Import-Module ADDSDeployment
Install-ADDSForest `
  -CreateDnsDelegation:$false `
  -DatabasePath "C:\Windows\NTDS" `
  -DomainMode "WinThreshold" `
  -DomainName "test.local" `
  -DomainNetbiosName "TEST" `
  -ForestMode "WinThreshold" `
  -InstallDns:$true `
  -LogPath "C:\Windows\NTDS" `
  -NoRebootOnCompletion:$false `
  -SysvolPath "C:\Windows\SYSVOL" `
  -Force:$true
```

The taskbar at the bottom shows the Windows Start button, search icon, and several application icons. The system clock indicates 18:48 on 06/03/2021.
